

Vouchcode provenance report

Repository: E:\VOUCHCODE

Range: full history

Generated: 2026-08-21T11:31:34+00:00

Signing key fingerprint

7D7C BBC8 6885 009B B043 59D0 F26E E03E

Algorithm: ed25519. Full digest: 7d7cbbc86885009bb04359d0f26ee03e81bff62576c564e91aadcb5805883fd9

Verifying this report's signature proves that its contents have not been altered since it was signed by the holder of the key below. It does not prove who that holder is. Anyone can generate a key and sign a report with it. To establish identity, compare the key fingerprint below against a copy of the same fingerprint obtained independently of this report, for example one published in the developer's repository or profile at an earlier date. Matching fingerprints mean the same key produced both. Differing fingerprints mean this report was not signed by the key you expected.

Authorship

Percentages are over lines of changed logic. Renamed and moved code is excluded from the denominator, because the syntax tree proves its logic did not change and it was not authored in this range.

Measure	Value
Commits in range	65
Merge commits (excluded from scoring)	1
Retroactively scanned commits	50
Hunks analyzed	820
Hunks carrying new logic	654
Lines of new logic	18041
AI-attributed	45.6 percent
Human-attributed	51.0 percent
Unclassified	3.3 percent

Attribution sources

These are not interchangeable. A structural result is proved, a tool signal is reported, and a stylometric result is inferred and carries an explicit confidence below certainty. Read any percentage above alongside how much of it rests on inference.

Source	Hunks	What this means
structural	166	Certainty. The syntax tree proves the logic did not change.
stylometry	654	Inference. The code diverges from the author's prior style.

Comprehension verification

No commit in this range was evaluated, so there is no pass rate. The rate is over evaluated commits only. Commits excluded by decision, such as merges, and commits skipped because no terminal was attached, are listed separately and are never counted as passes.

Outcome	Commits
Evaluated	0
Passed	0
Failed	0
Not evaluated: excluded_merge	1
Not evaluated: excluded_retroactive	50
Not evaluated: not_evaluated	6
Not evaluated: not_required	8
